

Dear E30Love Customer,

Thank you for your purchase of the 'DashPort' BMW glove box power adapter. Your new adapter will allow you to power 12v devices from the glovebox flashlight (torch) connector port.

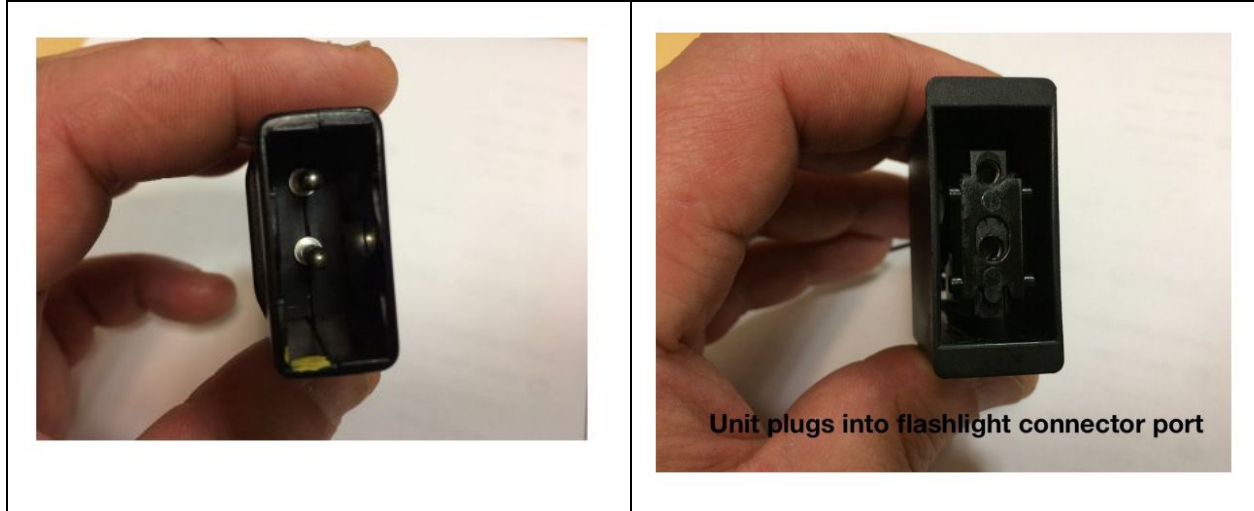

Before Installing Your Adapter:

Locate the power port on the left side of the glove box. If a factory flashlight(torch) exists, pull it forward to remove. If the flashlight doesn't exist, look with good lighting until you locate the port. They can be located in slightly different locations based on BMW model and year.

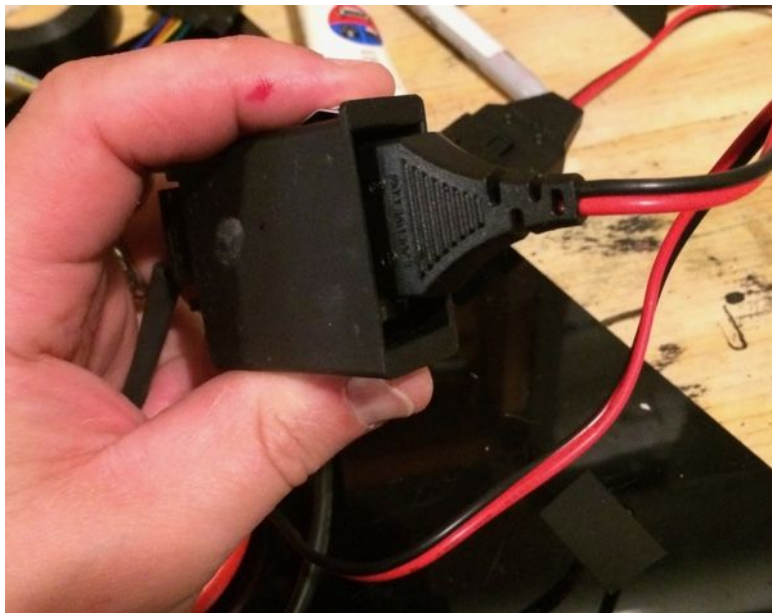

To Connect:

The port has 2 holes, covered by a small plastic tab/cover. In normal operation the flashlight moves this cover up or down a few mm when inserted. In our case, you must slide/click up or down the cover with your fingertip. It will easily click and slide downward.

Once the cover tab is moved out of place, it will reveal 2 holes. The DashPort adapter plugs into this with the Black (-) terminal at the top, and the Red (+) at the bottom. Reverse orientation if your devices fail to power.
